Hangman Game

Game Description

My game is rated E for everyone.

This is a hangman game that will have the user try to guess the food item. I will have 15 different food items listed for the user to try and figure out by selecting the letters on the screen and trying to “hang” the little man on the right side of the screen. There will be a try again button if you lose on the losing screen. And as well as one on the winner screen!

How to play this game?

When you start the game all you have to do is hit the play button on the welcome screen. Then select any letter that you want to and hope that it’s a correct letter for the food item you are trying to spell. Any time the hangman on the right side of the screen grows another body part; you know that you aren’t guessing the right letters. If you guess a letter and nothing grows on the hangman, then you are on your way to winning! If you don’t guess the right word, the next screen will tell you that you have lost. If you did guess the right word without hanging the little man, the next screen will tell you, you are a winner!

Win/Lose Conditions

Just like the original hangman, you want to try and guess all of the letters of the correct food item before you hang the man on the right side of the screen or you will lose! Get the food item correct and you are a winner! There will be screens that tell you rather you won or lost after you finish.

Screen shots of the splash/into screen, game play screen and win/lose screen.

I do not have any images that I created outside of Flash. I used the brush tool and drew my images for my game and do not have any images to add a resource to! Below however are my screen captures for the four screens that my game will display at different points while playing.
